User’s Guide
Thank you…

Thank you for purchasing a Mark-10 Series 5 digital force gauge, designed for tension and compression testing applications from 0.12 to 2,000 lbF (0.5 N to 10,000 N) full scale. The Series 5 is an essential component of a force testing system, typically also comprising a test stand, grips, and data collection software.

With proper usage, we are confident that you will get many years of great service with this product. Mark-10 force gauges are ruggedly built for many years of service in laboratory and industrial environments.

This User’s Guide provides setup, safety, and operation instructions. Dimensions and specifications are also provided. For additional information or answers to your questions, please do not hesitate to contact us. Our technical support and engineering teams are eager to assist you.

Before use, each person who is to use a Series 5 force gauge should be fully trained in appropriate operation and safety procedures.

1.2 Safety / Proper Usage

Caution!

Note the force gauge’s capacity before use and ensure that the capacity is not exceeded. Producing a force greater than 200% of the gauge’s capacity can damage the internal load cell. An overload can occur whether the gauge is powered on or off.

Typical materials able to be tested include many manufactured items, such as springs, electronic components, fasteners, caps, films, mechanical assemblies, and many others. Items that should not be used with the gauge include potentially flammable substances or products, items that can shatter in an unsafe manner, and any other components that can present an exceedingly hazardous situation when acted upon by a force.

The following safety checks and procedures should be performed before and during operation:

1. Never operate the gauge if there is any visible damage to the AC adapter or the gauge itself.
2. Ensure that the gauge is kept away from water or any other electrically conductive liquids at all times.
3. The gauge should be serviced by a trained technician only. AC power must be disconnected and the gauge must be powered off before the housing is opened.
4. Always consider the characteristics of the sample being tested before initiating a test. A risk assessment should be carried out beforehand to ensure that all safety measures have been addressed and implemented.
5. Wear eye and face protection when testing, especially when testing brittle samples that have the potential to shatter under force. Be aware of the dangers posed by potential energy that can...
accumulate in the sample during testing. Extra bodily protection should be worn if a destructive failure of a test sample is possible.

6. In certain applications, such as the testing of brittle samples that can shatter, or other applications that could lead to a hazardous situation, it is strongly recommended that a machine guarding system be employed to protect the operator and others in the vicinity from shards or debris.

7. When the gauge is not in use, ensure that the power is turned off.

## 2 POWER

The gauge is powered either by an 8.4V NiMH rechargeable battery or by an AC adapter. Since these batteries are subject to self discharge, it may be necessary to recharge the unit after a prolonged period of storage. Plug the accompanying charger into the AC outlet and insert the charger plug into the receptacle on the gauge (refer to the illustration below). The battery will fully charge in approximately 8 hours.

![Diagram of power input jack, USB connector, and Serial connector]

**Caution!**

Do not use chargers or batteries other than supplied or instrument damage may occur.

If the AC adapter is plugged in, an icon appears in the lower left corner of the display, as follows: ![Icon](image)

If the AC adapter is not plugged in, battery power drainage is denoted in a five-step process:

1. When battery life is greater than 75%, the following indicator is present: ![Indicator 1](image)
2. When battery life is between 50% and 75%, the following indicator is present: ![Indicator 2](image)
3. When battery life is between 25% and 50%, the following indicator is present: ![Indicator 3](image)
4. When battery life is less than 25%, the following indicator is present: ![Indicator 4](image)
5. When battery life drops to approximately 2%, the indicator from step 4 will be flashing. Several minutes after (timing depends on usage and whether the backlight is turned on or off), a message appears, “BATTERY VOLTAGE TOO LOW. POWERING OFF”. A 4-tone audio indicator will sound and the gauge will power off.

The gauge can be configured to automatically power off following a period of inactivity. Refer to the **Other Settings** section for details.

If battery replacement is necessary, the battery may be accessed by separating the two halves of the gauge. Refer to the **Setup** section for details.
3 SETUP

3.1 Mechanical Setup

3.1.1 Loading shaft orientation
In order to accommodate a variety of testing requirements, the orientation of the loading shaft may be set up in either of the two positions shown below. In order to change the loading shaft orientation, loosen the two captive screws on the back side of the housing, separate the two housing halves, rotate one half 180 degrees, and reassemble. Contact between the two halves is made by the spring pins and contact pads on the printed circuit boards. Note that models M5-1000, M5-1500, and M5-2000 do not utilize a load cell shaft, however, the same rotation procedure applies.

![Load cell shaft up and down]

3.1.2 Mounting to a plate
Although the gauge may be used by hand, proper mounting is important if attached to a fixture or test stand. The round steel insert with a hole in the back of the housing is provided to withstand the load during a test. A mating dowel pin should be used (see illustration below). Mounting plates on Mark-10 test stands include a dowel pin and clearance holes for the four threaded holes located near the corners of the housing. These holes are designed to accommodate screws in order to hold the gauge in place (Mark-10 test stands include a set of thumb screws for gauge mounting). The screws must **not** be used for load bearing purposes. Failure to use a dowel pin properly can result in a hazardous situation.

![Mounting plate illustration]

3.1.3 Mounting attachments to the gauge
The force gauge's threaded loading shaft is designed to accommodate common grips and attachments with female mounting holes. To mount a grip, gently thread it onto the shaft. Other mounting adapters are
also available to prevent rotation. Ensure that the grip or fixture is positioned to ensure axial load with respect to the loading shaft of the force gauge. When using a grip, ensure that it secures the sample in such a way that it is prevented from slipping out during a test, preventing a potential safety risk to the operator and others in the vicinity. If using a grip or fixture from a supplier other than Mark-10, ensure that it is constructed of suitably rugged materials and components.

Do not use jam nuts or tools to tighten grips or attachments onto the shaft. *Finger-tighten only.*

### 3.2 Installing the USB driver

If communicating via USB, install the USB driver provided on the Resource CD. Installation instructions may also be found on the CD or may be downloaded from [www.mark-10.com](http://www.mark-10.com).

**Caution!**

*Install the USB driver before physically connecting the gauge to a PC with the USB cable.*

Further instructions for configuring and using the gauge’s outputs are provided in the [Communications and Outputs](#) section.

### 4 HOME SCREEN AND CONTROLS

#### 4.1 Home Screen

<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1   | Tension / compression indicator    | - indicates a compression (push) direction  
|     |                                    | - indicates a tension (pull) direction  
|     |                                    | These indicators are used throughout the display and menu.                                                                                                                                         |
| 2   | Compression Peak                   | The maximum measured compression peak reading. This reading may be reset by pressing ZERO or by powering the gauge off and on.                                                                            |
| 3   | Tension Peak / Static COF          | The maximum measured tension peak or static coefficient of friction (for M5-2-COF gauge). May be reset by pressing ZERO or by powering the gauge off                                                      |
### Primary reading / Kinetic COF

The current displayed force reading. See **Operating Modes** section for details. For the M5-2-COF gauge, this reading represents the kinetic coefficient of friction when the gauge is set to COF unit of measurement (see **Units** indicator below) and has completed an **Average** sequence (see **Operating Modes** section for details).

### Load bar

Analog indicator to help identify when an overload condition is imminent. The bar increases either to the right or to the left from the midpoint of the graph. Increasing to the right indicates compression load, increasing to the left indicates tension load. If set points are enabled, triangular markers are displayed for visual convenience. This indicator reflects the actual load, which may not correspond to the primary reading (depends on operating mode). The **ZERO** key does not reset the load bar. See **Operating Modes** section for details.

### Units

The current measurement unit. Abbreviations are as follows:
- lbF – Pound-force
- ozF – Ounce-force
- kgF – Kilogram-force
- gF – Gram-force
- N – Newton
- kN – Kilonewton
- mN – Millinewton
- COF – Coefficient of friction (M5-2-COF gauge only)

**Note:** not all gauge capacities measure in all the above units. Refer to the capacity / resolution table in the **Specifications** section for details.

### Mode

The current measurement mode. Abbreviations are as follows:
- RT – Real Time
- PC – Peak Compression
- PT – Peak Tension (static COF for M5-2-COF gauge)
- A – Average Mode (kinetic COF for M5-2-COF gauge)
- ET – External Trigger Mode

See **Operating Modes** section for details about each of these modes.

### Number of stored data points

The number of stored data points in memory, up to 1000. Displayed only if **Memory Storage** is enabled for the **DATA** key.

### Battery / AC adapter indicator

Either the AC adapter icon or battery power icon will be shown, depending on power conditions. Refer to the **Power** section for details.

### Automatic data output indicator

If **Auto Output** has been enabled under **Serial / USB Settings**, this indicator is displayed. When automatic data output is occurring, the icon becomes animated. See **Communications and Outputs** section for details.

### High / low limit indicators

Correspond to the programmed set points. Indicator definitions are as follows:
- ▲ – the displayed value is greater than the upper force limit
- ▼ – the displayed value is less than the lower force limit
- ▼ – the displayed value is between the limits

### Set points

The programmed force limits. Typically used for pass/fail type testing. 1, 2, or no indicators may be present, depending on the configuration shown in the **Set Points** menu item.
4.2 Controls

<table>
<thead>
<tr>
<th>Primary Label</th>
<th>Primary Function</th>

<td>N/A</td>
<td>N/A</td>
</tr>
</tbody>
</table>

4.3 Menu navigation basics
Most of the gauge’s various functions and parameters are configured through the main menu. To access the menu press **MENU**. Use the **UP** and **DOWN** keys to scroll through the items. The current selection is denoted with clear text over a dark background. Press **ENTER** to select a menu item, then use **UP** and **DOWN** again to scroll through the sub-menus. Press **ENTER** again to select the sub-menu item.

For parameters that may be either selected or deselected, press **ENTER** to toggle between selecting and deselecting. An asterisk (*) to the left of the parameter label is used to indicate when the parameter has been selected.

For parameters requiring the input of a numerical value, use the **UP** and **DOWN** keys to increment or decrement the value. Press and hold either key to auto-increment at a gradually increasing rate. When the desired value has been reached, press **ENTER** to save the change and revert back to the sub-menu item, or press **ESCAPE** to revert back to the sub-menu item without saving. Press **ESCAPE** to revert one step back in the menu hierarchy until back into normal operating mode.

Refer to the following sections for details about setting up particular functions and parameters.

5 OPERATING MODES

**Caution!**
In any operating mode, if the capacity of the instrument has been exceeded by more than 110%, the display will show “OVER” to indicate an overload. A continuous audible tone will be sounded until the **MENU** key has been pressed or the load has been reduced to a safe level.

Five operating modes are possible with Series 5 gauges. To cycle between the modes, press **MODE** while in the home screen.
5.1 Real time (RT)
The primary reading corresponds to the live measured reading.

5.2 Peak Compression (PC)
The primary reading corresponds to the peak compression reading observed. If the actual force
decreases from the peak value, the peak will still be retained in the primary reading area of the display.
Pressing ZERO will reset the value.

5.3 Peak Tension / Static Coefficient of Friction (PT)
Same as Peak Compression, but for tension readings.

In the M5-2-COF gauge, the reading in this mode represents the static coefficient of friction.

Note: The static COF is always represented in the upper right corner of the display by the peak tension value, regardless of the operating mode.

5.4 Average Mode / Kinetic Coefficient of Friction (AVG)
Average mode is used to obtain an average force over time. This reading also represents the kinetic coefficient of friction for the M5-2-COF gauge. Applications include measurement of peel force, COF, muscle strength, frictional force, and other tests requiring time-averaged readings.

Before the parameters of Average Mode can be configured, it must be enabled. To do so, select Average Mode from the menu, scroll to Enable and press ENTER. The display appears as follows:

The averaging function operates in one of two ways:

1. Averaging occurs between the trigger force and defined time limit, as illustrated below:

2. Averaging occurs only while above the trigger force. As the force drops back down to this trigger, averaging stops. To enable this function, scroll to Stop at Force and press ENTER.

Select Settings to configure Trigger Force, Initial Delay, and Averaging Time:
### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Trigger Force</strong> or <strong>Start / Stop Force</strong></td>
<td>The minimum force required to start the averaging sequence. Toggle between compression and tension directions by pressing the <strong>DIRECTION</strong> key. Initial delay follows the trigger force. If <strong>Stop at Force</strong> is enabled, this parameter is referred to as <strong>Start / Stop Force</strong>, denoting the minimum force for which averaging will be active.</td>
</tr>
<tr>
<td><strong>Initial Delay</strong></td>
<td>The time delay, after the trigger force, before the averaging sequence commences. <strong>Available settings</strong>: 0.0 – 300.0 sec., in 0.1 sec. increments</td>
</tr>
<tr>
<td><strong>Averaging Time</strong></td>
<td>The time duration of the averaging sequence. This setting is ignored when <strong>Stop at Force</strong> is enabled, unless the 300 sec. limit is reached. <strong>Available settings</strong>: 0.1 – 300.0 sec., in 0.1 sec. increments</td>
</tr>
</tbody>
</table>

After the parameters have been configured and the menu has been exited, press **MODE** until **AVG** is displayed. Then press **ZERO**. Average mode is now armed, and the averaging sequence will commence when the trigger force has occurred. The current status of the averaging sequence is displayed below the primary reading, as follows:

<table>
<thead>
<tr>
<th>Step</th>
<th>Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>TRIG WAIT</td>
<td>The trigger force has not yet occurred.</td>
</tr>
<tr>
<td>2</td>
<td>INIT DLY</td>
<td>The initial delay is currently taking place.</td>
</tr>
<tr>
<td>3</td>
<td>AVERAGING</td>
<td>The gauge is collecting readings. The status will be flashing until averaging has been completed.</td>
</tr>
<tr>
<td>4</td>
<td>AVRG DONE</td>
<td>Averaging has been completed. The average force is displayed in the primary reading.</td>
</tr>
</tbody>
</table>

At the completion of the averaging sequence, the peak values are retained until **ZERO** is pressed. Another averaging sequence may be started after **ZERO** has been pressed. To exit Average mode, press **MODE** and select the desired measuring mode.

5.5 **COF Sled Weight** *(for M5-2-COF gauge only)*

The M5-2-COF performs COF calculations by dividing the force by the sled weight. For example, a force of 100 gF divided by 200 g equals 0.5 COF. Although many COF testing applications require a sled weight of 200 g, the gauge allows the user to change the sled weight to comply with other requirements. To modify the sled weight, select **COF** from the menu. The display appears as follows:

```
COF
* Enabled
Sled Weight Unit
  g
Sled Weight
  200.0
```

**Available sled weight settings**: 100 – 1000 g
5.6 External Trigger (ET)

This mode of operation is useful for measuring electrical contact activation force as well as synchronization of multiple instruments for a “snapshot” view of applied forces. It is possible to capture the reading with a normally open contact (high to low transition of the trigger signal) or a normally closed contact (low to high transition).

Before the parameters of External Trigger Mode can be configured, it must be enabled. To do so, enter the main menu, select **External Trigger**, scroll to one of the four available options and press **ENTER**. The options are as follows:

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Momentary High → Low</td>
<td>The display will freeze the captured reading until ZERO is pressed. Applies to a high to low transition of the trigger signal.</td>
</tr>
<tr>
<td>Momentary Low → High</td>
<td>The display will freeze the captured reading until ZERO is pressed. Applies to a low to high transition of the trigger signal.</td>
</tr>
<tr>
<td>Maintained High</td>
<td>The display will show the captured reading only for as long as a high signal is maintained.</td>
</tr>
<tr>
<td>Maintained Low</td>
<td>The display will show the captured reading only for as long as a low signal is maintained.</td>
</tr>
</tbody>
</table>

After the selection has been made and the menu has been exited, press **MODE** until **ET** is displayed. External Trigger mode is now armed. Refer to the pin diagram in the Communications and Outputs section for connection information.

To exit External Trigger mode, press **MODE** and select the desired measuring mode.

**Note:** As long as external trigger has been enabled, it is still active even if the gauge is in Real Time mode. After the display freezes, any programmed set points will be active. However, if the gauge is in External Trigger mode, any programmed set points will be inactive.

5.6.1 External Trigger Schematic Diagram
Note: Custom cabling is required to connect to a switch, or to connect a switch and a Mark-10 test stand simultaneously.

6 DIGITAL FILTERS

Digital filters are provided to help smooth out the readings in situations where there is mechanical interference in the work area or test sample. These filters utilize the moving average technique in which consecutive readings are pushed through a buffer and the displayed reading is the average of the buffer contents. By varying the length of the buffer, a variable smoothing effect can be achieved. The selection of 1 will disable the filter since the average of a single value is the value itself.

To access digital filter settings, select Filters from the menu. The display appears as follows:

Two filters are available:

- **Current Reading** – Applies to the peak capture rate of the instrument.
- **Displayed Reading** – Applies to the primary reading on the display.

Available settings: 1,2,4,8,16,32,64,128,256,512,1024. It is recommended to keep the current reading filter at its lowest value for best performance, and the displayed reading filter at its highest value for best stability.

7 SET POINTS

7.1 General Information

Set points are useful for tolerance checking (pass/fail), triggering an external device such as a motorized test stand, or alarm indication in process control applications. Two limits, high and low, are specified and stored in the non-volatile memory of the instrument and the primary reading is compared to these limits. The results of the comparisons are indicated through the three outputs provided on the 15-pin connector, thus providing “under”, “in range”, and “over” signaling. These outputs can be connected to indicators, buzzers, or relays as required for the application.

7.2 Configuration

To configure set points, select Set Points from the menu. The screen appears as follows:
Either one, two, or none of the set points may be enabled. To toggle between the tension and compression directions, press the **DIRECTION** key.

If two set points have been enabled, they are displayed in the upper left corner of the display. If only one set point has been enabled, the word “OFF” appears in place of the value. If no set points have been enabled, the upper left corner of the display will be blank.

When set points are enabled, the following indicators are shown to the left of the primary reading:

- ▲ – the displayed value is greater than the upper force limit (NO GO HIGH)
- ■ – the displayed value is between the limits (GO)
- ▼ – the displayed value is less than the lower force limit (NO GO LOW)

**Note:** Set point indicators and outputs reference the displayed reading, not necessarily the current live load.

### 7.3 Set Point Outputs Schematic

![Set Point Outputs Schematic](image)

### 7.4 Using Set Points to Control a Mark-10 Test Stand

When using set points to stop/cycle Mark-10 motorized test stands, the upper and lower set points must be set to **opposite** measuring directions. Both set points must be set, even if the intended application is to stop/cycle at only one of the set points. The opposite set point should be a value sufficiently large that it does not get triggered during the course of the test.

For certain Mark-10 test stands, the upper and lower set point directions are reversed.
8 DATA MEMORY AND STATISTICS

Series 5 gauges have storage capacity of 1,000 data points. Readings may be stored, viewed, and output to an external device. Individual, or all, data points may be deleted. Statistics are calculated for the data presently in memory.

To enable memory storage, select DATA Key from the menu, then scroll to Memory Storage and press ENTER. Then exit the menu. In the home screen, the data record number 0000 appears below the primary reading. Press DATA at any time to save the displayed reading. The record number will increment each time DATA is pressed. If DATA is pressed when memory is full the message “MEMORY FULL” will be flashed at the bottom of the display and a double audio tone will be sounded.

To view, edit, and output stored readings and statistics, select Memory from the menu. The screen appears as follows:

<table>
<thead>
<tr>
<th>8.1 View Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>All the saved data points may be viewed. The record number is displayed, along with the corresponding value and presently set unit of measurement. Any readings may be deleted individually. To do so, scroll to the desired reading and press DELETE. The letter “D” appears to the left of the record number, indicating that the gauge is in Delete mode, as follows:</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Record</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>0001</td>
<td>2.458 lbF</td>
</tr>
<tr>
<td>0002</td>
<td>2.224 lbF</td>
</tr>
<tr>
<td>0003</td>
<td>2.446 lbF</td>
</tr>
<tr>
<td>0004</td>
<td>1.890 lbF</td>
</tr>
<tr>
<td>D 0005</td>
<td>2.098 lbF</td>
</tr>
<tr>
<td>0006</td>
<td>1.998 lbF</td>
</tr>
<tr>
<td>0007</td>
<td>2.042 lbF</td>
</tr>
</tbody>
</table>

Press ENTER to delete the value. To exit Delete mode, press DELETE again. Any number of readings may be individually deleted, however, all readings may also be cleared simultaneously. Refer to the Clear All Data section for details.

8.2 Statistics
Statistical calculations are performed for the saved values. Calculations include number of readings, minimum, maximum, mean, and standard deviation.

8.3 Output Data
Press ENTER to output data to an external device. The display will show, “SENDING DATA…”, then “DATA SENT”. If there was a problem with communication, the display will show, “DATA NOT SENT”. Saved data can be downloaded by some Mark-10 data collection programs. Refer to their respective user’s guides for details.

8.4 Output Statistics
Press ENTER to output statistics to an external device. The display will show, “SENDING STATS…”, then “STATS SENT”. If there was a problem with communication, the display will show, “STATS NOT SENT”.

MARK-10
8.5 Output Data & Stats
Press ENTER to output data and statistics to an external device. The display will show, "SENDING DATA", then "SENDING STATS...", then "DATA SENT", then "STATS SENT". If there was a problem with communication, the display will show, "DATA NOT SENT" and/or "STATS NOT SENT".

8.6 Clear All Data
Press ENTER to clear all data from the memory. A prompt will be shown, “CLEAR ALL DATA?”. Select Yes to clear all the data, or No to return to the sub-menu.

For output of data and/or statistics, RS-232 or USB output must be enabled. Data formatting is <CR><LF> following each value. Units can be either included or excluded. Output of data via the Mitutoyo output is possible, however, output of statistics is not. Refer to the Communications and Outputs section for details.

Note: Data is not retained while the gauge is powered off. However, the gauge protects against accidental or automatic power-off. If manually powering the instrument off, or if the inactivity time limit for the Automatic Shutoff function has been reached, the following warning message appears:

*** WARNING ***
DATA IN MEMORY
WILL BE LOST

CANCEL
POWER OFF

If no option is selected, this screen will be displayed indefinitely, or until battery power has been depleted.

9 COMMUNICATIONS AND OUTPUTS

Communication with Series 5 force gauges is achieved through the micro USB or 15-pin serial ports located at the bottom of the instrument, as shown in the illustration in the Power section. Communication is possible only when the gauge is in the main operating screen (i.e. not in a menu or configuration area).

9.1 Serial / USB
To set up RS-232 and USB communication, select Serial/USB Settings from the menu. The screen appears as follows:

<table>
<thead>
<tr>
<th>SERIAL/USB SETTINGS</th>
</tr>
</thead>
<tbody>
<tr>
<td>* RS232 Selected</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>USB Selected</td>
</tr>
<tr>
<td>+ Baud Rate</td>
</tr>
<tr>
<td>+ Data Format</td>
</tr>
<tr>
<td>+ Auto Output</td>
</tr>
</tbody>
</table>

Select either RS-232 or USB input (output is always simultaneous through both the USB and RS-232 ports). RS-232 must be selected when communicating through a Mark-10 test stand controller. When communicating from the gauge directly to a PC or data collector, either RS-232 or USB can be selected as required. Press DATA to transmit individual data points or to commence an automatic output sequence (see Automatic Output sub-section for details). Single point or continuous data may also be requested via ASCII commands from an external device (see Command Set sub-section for details).
Communication settings are permanently set to the following:

- **Data Bits:** 8
- **Stop Bits:** 1
- **Parity:** None

Other settings are configured as follows:

### 9.1.1 Baud Rate
Select the baud rate as required for the application. It must be set to the same value as the receiving device. When communicating with a Mark-10 test stand controller, the baud rate must be set to 115,200.

### 9.1.2 Data Format
Select the desired data format. The screen appears as follows:

<table>
<thead>
<tr>
<th>Selection</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Numeric + Units</td>
<td>Output format includes the value and unit of measure. Compression values have positive polarity, tension values have negative polarity.</td>
</tr>
<tr>
<td>Numeric Only</td>
<td>Output format includes the value only. Polarity same as above.</td>
</tr>
<tr>
<td>Invert Polarity</td>
<td>Compression values have negative polarity, tension values have positive polarity. May be selected in addition to the Numeric + Units / Numeric Only selection.</td>
</tr>
<tr>
<td>Omit Polarity</td>
<td>Both directions are formatted with positive polarity. May be selected in addition to the Numeric + Units / Numeric Only selection.</td>
</tr>
</tbody>
</table>

### 9.1.3 Automatic Output
The gauge has the ability to output data continuously via RS-232 or USB. To enable automatic output, select **Auto Output** from the **Serial/USB Settings** sub-menu. The screen appears as follows:

- **Enabled**
- **Outputs per Sec.:** 10

Select **Enabled** to activate automatic output. The number of outputs per second can be set to 1, 2, 5, 10, 25, 50, 125, or 250. The capabilities of the receiving device should be considered when selecting the data output rate.

After the settings have been saved, revert to the home screen. An icon appears in the lower left corner of the display, as follows: This indicates that automatic data output has been armed. Automatic output of data may be initiated by pressing **DATA** or by sending the appropriate ASCII command from an external device (see **Command Set** sub-section for details). The icon will become animated, signaling that automatic output is occurring. Press **DATA** again to end the data transmission.
9.2 Mitutoyo BCD settings
This output is useful for connection to data collectors, printers, multiplexers, or any other device capable of accepting Mitutoyo BCD data. Individual data points may be transmitted by pressing DATA or by requesting it from the Mitutoyo communication device (if available). To enable Mitutoyo output, select the desired format – either with polarity or without polarity. The screen appears as follows:

<table>
<thead>
<tr>
<th>MITUTOYO BCD</th>
</tr>
</thead>
<tbody>
<tr>
<td>* Disabled</td>
</tr>
<tr>
<td>Enabled</td>
</tr>
<tr>
<td>* Without Polarity</td>
</tr>
<tr>
<td>With Polarity</td>
</tr>
</tbody>
</table>

9.3 Analog Output
This output can be used for chart recorders, oscilloscopes, data acquisition systems, or any other compatible devices with analog inputs. The output produces ±1 volt at full scale of the instrument. The polarity of the signal is positive for compression and negative for tension.

9.4 DATA Key Functions
The DATA key can be configured to perform several functions. To configure the DATA key, select DATA Key from the menu. The display appears as follows:

<table>
<thead>
<tr>
<th>DATA KEY</th>
</tr>
</thead>
<tbody>
<tr>
<td>* RS232/USB Output</td>
</tr>
<tr>
<td>Mitutoyo Output</td>
</tr>
<tr>
<td>Memory Storage</td>
</tr>
</tbody>
</table>

Three options are available:

<table>
<thead>
<tr>
<th>Selection</th>
<th>Function when pressing DATA</th>
</tr>
</thead>
<tbody>
<tr>
<td>RS232/USB Output</td>
<td>Outputs data via the serial and USB ports</td>
</tr>
<tr>
<td>Mitutoyo Output</td>
<td>Outputs data via Mitutoyo (Digimatic) through the serial port</td>
</tr>
<tr>
<td>Memory Storage</td>
<td>Stores a reading to memory (refer to the Memory section for details)</td>
</tr>
</tbody>
</table>

Any combination of the above functions may be selected.
9.5 I/O Connector Pin Diagram (DB-9HD-15 female)

<table>
<thead>
<tr>
<th>Pin No.</th>

</table>

9.6 Command Set / Gauge Control Language 2 (GCL2)
Series 5 force gauges may be controlled by an external device through the RS-232 or USB channels. The following is a list of supported commands and their explanations. All commands must be terminated by a CR (Carriage Return) character, 0x0D, or a CR-LF (Carriage Return – Line Feed) pair, where the Line Feed, 0x0A, is ignored.
Request Readings

? Request the displayed reading (dependent on operating mode)
?C Request the current (real time) reading
?PT Request the peak tension reading
?PC Request the peak compression reading
?ET Request the reading obtained during the External trigger mode
?A Request the average reading obtained during the Average mode

Units

LB Switch units to pound-force
OZ Switch units to ounce-force
KG Switch units to kilogram-force
G Switch units to gram-force
N Switch units to Newtons
MN Switch units to Milli-Newton
KN Switch units to Kilo-Newton

Basic Functions

CUR Current mode (real time mode) for primary reading
PT Peak Tension mode for primary reading
PC Peak Compression mode for primary reading
CLR Clear peaks
Z Zero display and perform the CLR function

Filters

FLTPn Digital filter for displayed readings
FLTCn Digital filter for current readings
n=0-10, filter = 2^n, ex: n=0= no filter, n=10=1024 samples averaged

Memory & Statistics

MEM Transmit all stored readings
STA Transmit statistics
CLRMEM Clear all stored readings from memory

Set Points

SPHD Disable high set point
SPLD Disable low set point
SPHn High set point. n=value (+ for compression, - for tension)
SPLn Low set point. n=value (+ for compression, - for tension)

USB/RS-232 Communication

FULL USB/RS-232 transmission with units
NUM USB/RS-232 transmission without units (only numeric values)
AOUTn Auto-transmit n times per second n=1,2,5,10,25,50,125,250. 0=disabled
Note: n = 1 = yields 50 times per second. This is provided for backward compatibility with legacy gauges.
IPOLn Invert polarity of output. n=1=invert polarity. n=0=normal (default)
Note: Normal polarity is positive for compression and negative for tension.
OPOLn Omit polarity of output. n=1=omit polarity. n=0=include polarity (default)
Note: The “+” sign is always omitted. A “–” sign is sent when polarity is enabled.

Mitutoyo Communication

MIT Enable Mitutoyo output
MITD Disable Mitutoyo output
POL Mitutoyo output with polarity (+ for compression, - for tension)
NPOL Mitutoyo output without polarity (absolute value)
PM Print/send data to a Mitutoyo-compatible device
Averaging
A  Enable Average mode
AD Disable Average mode
AM Select Average mode (if enabled) for primary reading
ATn Average time. n=0.1-300.0 seconds
DELn Initial delay. n=0.1-300.0 seconds
TRFn Trigger force. n=value (+ for compression, - for tension)

External Trigger
ETH Enable high level-triggered External trigger mode
ETL Enable low level-triggered External trigger mode
ETHL Enable reading captured on a high to low transition
ETLH Enable reading captured on a low to high transition
ETD Disable External trigger mode

Input / Output Bits
Sn Set output bit (open drain, pull to ground). n=0,1,2
Cn Clear output bit. n=0,1,2
Rn Read current status of output bit or level of input pin. n=0,1,2,3

Personality
RN Read product name
RM Read model number
RV Read firmware version number
RS Read serial number

Other Commands
AOFFn Auto-shutoff. n=0-30 minutes. 0=auto shutoff disabled
SAVE Save current settings in nonvolatile memory
LIST List current settings and status

9.7 Command Responses
In response to a reading request command (those which begin with ‘?’) the gauge will return a string with
the load data, followed by a space, then the load unit (if enabled under the Serial/USB Settings → Data
format sub-menu). It will be terminated by a CR-LF pair.

Example return strings:

-0.486 lbF<CR><LF>  0.486 lbF of tension force
1.724 N<CR><LF>     1.724 N of compression force

The number of digits after the decimal point is dependent of the gauge’s capacity and resolution.

By default, the minus sign (-) indicates tension, and the absence of a sign indicates compression.
However, positive / negative polarity may be inverted or omitted under the Serial/USB Settings → Data
Format sub-menu.

Following is an example LIST output:
V1.00;LBF;CUR;FLTC8;FLTP1;AOUT00;AOFF5;FULL;IPOL0;OPOL0;MIT;POL;B0

All fields are separated by “;”. The first field shows the firmware version, the last field shows the remaining
battery power (B0=full charge, B3=minimum power). All other fields show the status of settings and
features using the same abbreviations as the commands to set them.

Any detected errors are reported back by means of the following error codes:
10 CALIBRATION

10.1 Initial Physical Setup
The gauge should be mounted vertically to a test stand or fixture rugged enough to withstand a load equal to the full capacity of the instrument. Certified deadweights or master load cells should be used, along with appropriate mounting brackets and fixtures. Caution should be taken while handling such equipment.

10.2 Calibration Procedure

1. Select Calibration from the menu. The display appears as follows:

```
To invert the display, press the DIRECTION button, then press ENTER.
```

2. Press DIRECTION to invert the display, if desired. ENTER to continue. The display appears as follows:

```
Enter # cal points (1 to 10)
Compression: 5
Tension: 5
```

The gauge can be calibrated at up to 10 points in each direction. Enter the number of calibration points for each direction (compression and tension). At least one point must be selected for each direction.

**Note:** To achieve the accuracy specification of ±0.1%, it is recommended to calibrate the gauge at 5 or more even increments in both tension and compression directions. For example, a gauge with capacity of 10 lbF should be calibrated at 2, 4, 6, 8, and 10 lb loads in each direction.

3. To escape the Calibration menu at any time, press ESCAPE. The display appears as follows:

```
CALIBRATION NOT COMPLETE
```

Cancel
Exit w/o saving
Selecting “Cancel” will revert back to the Calibration setup. Selecting “Exit w/o saving” will return to the menu without saving changes.

4. After the number of calibration points has been entered, press ENTER. The display appears as follows:

   CALIBRATION
   OFFSET

   Place force gauge horizontally, then press ZERO.

5. Place the force gauge horizontally on a level surface free from vibration, then press ZERO. The gauge will calculate internal offsets, and the display appears as follows:

   CALIBRATION
   OFFSET

   Please wait…

   CALIBRATION
   OFFSET

   Sensor passed
   Analog passed

   If failed:

   CALIBRATION
   OFFSET

   Sensor failed
   Analog failed

6. The following screen appears after the offsets have been calculated:

   CALIBRATION
   COMPRESSION

   Attach necessary weight fixtures, then press ENTER.

   Attach weight fixtures (brackets, hooks, etc), as required. Do not yet attach any weights or apply any calibration loads. Press ENTER.

7. The display appears as follows:

   CALIBRATION
   COMPRESSION

   Optionally exercise sensor, then press ENTER.
Optionally exercise the load cell shaft several times (at full scale, if possible), then press **ENTER**.

8. The display appears as follows:

```
CALIBRATION
COMPRESSION
Gain adjust
Apply full scale load
10.000 lbF +/-20%,
then press ENTER.
```

Apply a weight equal to the full scale of the instrument, then press **ENTER**.

9. After displaying “Please wait…” the display appears as follows:

```
CALIBRATION
COMPRESSION
Ensure no load,
then press ZERO.
```

Remove the load applied in Step 8, leave the fixtures in place, then press **ZERO**.

10. The display appears as follows:

```
CALIBRATION
COMPRESSION
Apply load
1 OF 5
Enter load:
2.000 lbF
Press ENTER.
```

Use the **UP** and **DOWN** keys to adjust the load value as required. The load values default to even increments, as indicated by the previously entered number of data points (even increments are recommended for best results). For example, if a 50 lbF capacity gauge is calibrated, and 5 data points were selected, the load values will default to 10, 20, 30, 40, and 50 lb. Apply the calibration load. Then press **ENTER**.

Repeat the above step for the number of data points selected.

11. After all the compression calibration points have been completed, the display appears as follows:

```
CALIBRATION
COMPRESSION COMPLETE
Reverse direction
for tension.
Attach necessary
weight fixtures,
then press ENTER.
```

Press **ENTER**.

12. The display appears as follows:
Reverse the orientation of the load cell shaft by rotating the gauge 180 degrees. Press DIRECTION to invert the display. Then attach weight fixtures. The following screens will step through the same procedure as with the compression direction. Proceed in the same manner.

13. At the completion of the tension calibration, the display appears as follows:

To save the calibration information, select “Save & exit”. To exit without saving the data select “Exit without saving”.

14. Any errors are reported by the following screens:

Displayed at the start of calibration if a disallowed unit is selected.

Ensure that the load is not swinging, oscillating, or vibrating in any manner. Then try again.

The calibration weight does not match the set value.
The entered calibration point is too close to the previous point.

## 11 PASSWORDS

Two separate passwords may be set to control access to the Calibration section and to the menu and other keys. To access the passwords setup screen, select **Passwords** from the menu. The display appears as follows:

![Password Menu](image)

Select "+ More" for additional options:

![Extended Options](image)

### 11.1 Calibration Password

Select **Calibration** from the sub-menu. The display appears as follows:

![Calibration Sub-Menu](image)

To set the password, select **Enabled**, then **Set Password**. Use the **UP** and **DOWN** keys to increment and decrement the value, from 0 to 9999. When the desired value has been selected, press **ENTER**, then **ESC** to exit the sub-menu.
11.2 Menu Key Password
If enabled, every time the MENU key is selected, a password must be provided. Select Menu Key from the sub-menu. Follow the same procedure as described in the previous sub-section.

11.3 Locking Out Other Keys
Other keys may be locked out individually. Select any combination of keys (Units, Mode, Zero, Data, Clear, Power) by pressing ENTER in the Passwords sub-menu. Pressing a locked key will prompt the message “KEY PROTECTED” instead of performing the key’s function.

11.4 Password Prompts
If passwords have been enabled, the following will be displayed when pressing the MENU key or accessing the Calibration section:

Use the UP and DOWN keys to select the correct password, then press ENTER to continue.

If the incorrect password has been entered, the display appears as follows:

To re-enter the password, press ESC to exit to the home screen. Then, access the desired function and enter the password again when prompted.

If the password has been misplaced, it can be reset. Press ENTER to generate a request code. The request code must be supplied to Mark-10 or a distributor, who will then provide a corresponding authorization code. Enter the activation code to disable the password.

12 OTHER SETTINGS

12.1 Automatic Shutoff
The gauge may be configured to automatically power off following a period of inactivity while on battery power. Inactivity is defined as the absence of any key presses or load changes of 100 counts or less. To access these settings, select Automatic Shutoff from the menu. The display appears as follows:
12.2 Backlight
Although the backlight may be turned on and off at any time by pressing the BACKLIGHT key, there are several available initial settings (applicable upon powering on the gauge). To access these settings, select Backlight from the menu. The display appears as follows:

<table>
<thead>
<tr>
<th>Selection</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Off</td>
<td>Backlight to be off upon powering on the gauge.</td>
</tr>
<tr>
<td>On</td>
<td>Backlight to be on upon powering on the gauge.</td>
</tr>
<tr>
<td>Auto</td>
<td>Backlight to be on upon powering gauge, but will shut off after a period of inactivity (as defined in the Automatic Shutoff sub-section). The backlight will turn on again when activity resumes. The length of time of inactivity is programmed in minutes via the Set Minutes parameter. Available settings: 1-10, in 1 minute increments.</td>
</tr>
</tbody>
</table>

Note: If the AC adapter is plugged in, the gauge will ignore these settings and keep the backlight on.

12.3 LCD Contrast
The contrast of the display may be adjusted. Select LCD Contrast from the menu. The screen appears as follows:

Press ENTER to modify the contrast. Select a value from 0 to 25, 25 producing the most contrast.
12.4 Tones
Audible tones can be enabled for all key presses and alerts, such as overload, set point value reached, etc. The Set Point alert can be configured to be either a momentary tone or a continuous tone (until the load is restored to a value between the set points). To configure the functions for which audible tones will apply, select **Tones** from the menu. The screen appears as follows:

![Tones Menu Example](image)

12.5 Initial settings
This section is used to configure the initial settings upon powering on the gauge. The initial units of measurement and the primary reading measurement mode may be configured. To access these settings, select **Initial Settings** from the menu. The screen appears as follows:

![Initial Settings Menu Example](image)

The default values are lbF and Real Time.

12.6 Restore Default Settings
Default factory settings can be restored by selecting **Restore Defaults** from the menu. The settings may be found in the **Specifications** section. The screen appears as follows:

![Restore Defaults Menu Example](image)

12.7 Information / Welcome Screen
The following screen is displayed at power-up and can be accessed at any time by selecting **Information** from the menu:

![Welcome Screen Example](image)
### 13 SPECIFICATIONS

#### 13.1 General

<table>
<thead>
<tr>

Mark-10 Corporation has been an innovator in the force and torque measurement fields since 1979. We strive to achieve 100% customer satisfaction through excellence in product design, manufacturing and customer support. In addition to our standard line of products we can provide modifications and custom designs for OEM applications. Our engineering team is eager to satisfy any special requirements. Please contact us for further information or suggestions for improvement.
